

Debarment Check Bot Deployment Instruction

This document explains the installation and setup of the debarment check bot. Please follow the instructions below to set up for the bot deployment.

The debarment check excel file should be uploaded in the working_dir folder before the bot is launched. Only one file can be uploaded in working_dir at a time.

Setup

Please install the entire zip file on your desktop. This has to be installed on the Desktop. Then locate the .zip file and extract the zip file by clicking the right click and on the drop down click extract. Once you extracted your file. This file will be the home location where the bot will be mainly working at. All your output files and folders will be located here.

From the zip file make sure the executable file (.exe) is in there. This file is the bots main file. Once this is installed on your laptop, you will be able to launch the bot by clicking the icon of the installed file.

Before you launch the bot...

Make sure the list is in the correct given format. After the List is uploaded in the working_dir folder.

Template for the list

The date created, date expired, and results column should be empty because the bot will fill them out.

Once everything is set up, click the icon of the downloaded .exe file. Once this icon is clicked, a black window should be launched. Bot transition state, session state, and messages will appear. The messages in the black window are clear so you will be able to know which task the bot is doing in real time.

The icon should look like the icon in the screenshot below
